

Jantzen Audio SILVER Z-cap

Jantzen Audio Silver Capacitors are an axial type made from metallized polypropylene, specifically manufactured for audio purposes with no need for pre-aging.

SILVER Z-CAP IS THE MOST DETAILED AND SMOOTH SOUNDING CAPACITOR ON THE MARKET.

Our Z-cap Silver has a special inner structure for improved listening experience.

The materials we use are chosen for the best possible sonic results.

To secure the excellent quality of these caps our SILVER Z-caps have pure silver wire leads.

Special equipment is used for winding Silver Z-caps, minimizing inner vibration and reducing microphonic effect to insignificant levels.

Capacitors are available in a wide range of values with minimum tolerance, +/- 2%

The finish is a flame-retardant tape wrap, and the end of the cap is resin sealed to protect against humidity.

All JANTZEN Z-CAPS are LEAD FREE and RoHS COMPLIANT.

Technical Specifications:

Dielectric: Polypropylene

Tolerance: 1% - 2%

0,1 uF - 0,33 uF AC value of the voltage rating 1200 VDC / 600 VAC

0,47 uF - 22 uF AC value of the voltage rating 800 VDC / 425 VAC
