Application : Power bass

The **18NXB700** neodymium bass loudspeaker is specially designed to deliver high impact bass response, with exceptional high power capacity. It incorporates a 4" sandwich voice coil, kevlar paper cone, a powerful, vented neodymium magnetic structure with massive heatsink, die cast vented aluminium frame with triple aluminium demodulating rings, which reduced power compression, and double silicone spider assembly. This results in an incredible high efficient transducer for subwoofer applications, with the ability to handle high excursion with low distortion and reduced thermal power compression.

1. AES standard. Power is calculated on rated minimum impedance. Measurement is in 180 L box enclosure tuned 43 Hz using a 40-400 Hz band limited pink noise test signal applied continuously for 2 hours.
2. Program power is defined as 3db greater than AES Power Capacity.

* Linear Mathematical Xmax is calculated as: $(Hvc - Hg)/2 + Hg/4$ where Hvc is the voice coil depth and Hg is the gap depth.
