Materials of Construction

Voice Coil Former Diaphragm Material Polyimide Titanium w/ geodesic design for unparalleled strength

** = Multiple units exceeded published rating evaluated under AES500 and AES800 noise sources and test standards while mounted on Eminence's TI-2000 horn in a non-temperature controlled environment.

**** = The average on axis output across the entire usable frequency range when applying 1W/1m into the nominal impedance while mounted on a Community SH494 horn measured with: LMS (software calibrated) using a 0.25" [6.4mm] supplied microphone mounted 1m from horn mouth, Hafler P1500 Trans-Nova amplifier, 2700cu.ft. chamber w/ fiberglass on all six surfaces (three with custom made wedges). Plane-wave tube response and impedance curves measured with LMS on a 0.75" [19.1mm] diameter tube with adapter to allow for smooth transition to throat diameter and 1mW into nominal impedance.
