WOOFER L15P400<br>Professional Low Frequency Transducer

PART NUMBER 11100045

## Features

- 4-inch, fibreglass inside-outside copper voice coil
- 1600 Watt continuous program power handling
- 97 dB Sensitivity
- 30 Hz - 1.5 kHz Frequency range
- Aluminum demodulation ring
- Forced air ventilation and 14 mm top plate for minimum power compression
- Dual spider design with silicon based dampening control
- Triple-roll surround and corrugated straight cone geometry

Incredibly linear frequency response characteristics, extreme high power handling while generating the lowest harmonic distortion of any comparable 15 -inch transducer within its application range. The L15P400 uses a fibre loaded cone assembly along with a high excursion triple roll surround. This combination provides remarkable strength and a peak to peak maximum excursion of 52 mm . The $T$-pole also features RCF Precision's spaced gap demodulation technology, progressively braking the voice coil, providing a much smoother transition for the moving mass as it reaches its maximum excursion limits. Forced air venting system.

## Applications

The L15P400 is ideal for use in applications whereincredible power handling, long excursion and perfect control is required. Ideal for high quality professional bass reflex and bass-horn systems, incredible when used in double 15 " subwoofer configuration.
The transducer's low frequency extension, coupled with its extremely low generation of harmonic distortion, also makes it ideal for use within critical listening applications such as studio monitoring subwoofer systems.

$8 \times 06.5 \mathrm{~mm}$ holes to $45^{\circ}$

Frequency (Hz)
Frequency response curve of the loudspeaker taken in a hemispherical, free field environment and mounted in a closed box with an internal volume of 600 litres ( 21,2 cu.ft) enclosing the rear of the driver.

General Specifications

| Nominal Diameter | $380 / 15$ | $\mathrm{~mm} / \mathrm{inch}$ |

## Notes to Specifications

1 Program Power is defined as 3 dB greater than AES power. - 2 AES standard. - 3 Sensitivity measurement is based on a $100-500 \mathrm{~Hz}$ pink noise signal with input power of 2.83 V @ 8 Ohms. - 4 Thiele-Small parameters are measured after a 2 hour warm up period running the loudspeaker at full power handling capacity. - 5 The maximum linear excursion is calculated as: (Hvc - $\mathrm{Hg} / / 2+\mathrm{Hg} / 4$ where Hvc is the voice coil depth and Hg the gap depth. - 6 Calculated for front mounting on 18 mm thick board.
